Management Staff Project No. 5-51, "Study of ORR Local Reproduction"

1. A Management Staff Study of ORR Local Reproduction has been conducted in accordance with your request. The findings and recommendations of this study are set forth in detail in the attached subject report. (See Attachment A)

2. This report covers the on-site inspection of all local reproduction equipment located in ORR. Time lags or delays in local reproduction were not found to be in evidence. The production capacity of existing ORR local reproduction equipment is being utilized approximately 15% in one major service location and the utilization rates of the other service locations are not critical.

3. While this survey reveals that the ORR local reproduction problem is not one of critical magnitude at this time, the following positive remedial actions are recommended to effect improvement:

a. Preparation and publication of an ORR notice on "Local Reproduction".

b. Establishment of monitored local reproduction locations.

c. Improved logistics.

d. Evaluation of existing and procurement of additional Thermo-Fax equipment.
